SUMMARY

Software engineer with 5 years building and supporting a SaaS billing platform for telecom providers. Shipped C#/.NET and SQL features on an Agile team, then owned production billing, provisioning, payment and API issues from triage to resolution. AI Champion prototyping AI-powered support tooling.

EXPERIENCE

IDI Billing Solutions, Rochester, NY (Remote) **Aug 2021 – Present**

Software Support Specialist *Nov 2024 – Present*

- Selected as an AI Champion (2026); prototyping an AI tool that turns an analyst's open case queue and case history into a prioritized handoff report.
- Primary technical contact for 4 telecom accounts, including a new customer through launch; 10/10 satisfaction score.
- Closed 450+ support cases from July 2024 to June 2026, meeting SLA on all 194 P1/P2 (highest-priority) cases.
- Diagnose production billing, provisioning, payment and API issues with Engineering; traced and fixed invoice access broken by an IIS service-account change, and helped trace card-payment failures to a full Azure SQL database.
- Write production SQL fixes under change control, including correcting 4,500 eSIM and SIM records; modify provisioning scripts for 3 carrier and vendor integrations.
- Owned root-cause analysis of a telecom client's billing errors across two monthly cycles, coordinating Engineering, Product and the customer; findings led to a product enhancement.
- Covered a high-visibility national retail healthcare client for 3+ months during a colleague's leave, running twice-weekly status calls, production deployments and a hotfix; earned client compliments.
- Ran or supported 17 production deployments across 7 customer environments; cover primary on-call weeks, including after-hours outages.

Software Engineer, Customer Engineering *Mar 2023 – Nov 2024*

- Built C#/.NET and SQL features for the billing platform on an Agile team, owning user stories from estimation and breakdown through development and testing.
- Became the team's usage-processing expert: built its first parser feed for a new binary call-record format, then extended Ericsson 5G parsing (SGW, PGW, CHF records) to bill usage from files of hundreds of thousands of records.
- Developed provisioning and SOAP/REST API changes, tested them with Postman and automated suites, and shipped through code review in Azure DevOps.
- Delivered a fulfillment routing feature for a new customer fulfillment center: a new product catalog group, exporter updates and a revised SQL stored procedure.
- Maintained 450 nightly automated tests across 5 customers; built a failure-tracking sheet to triage broken tests.
- Cut setup of the billing-engine dev environment to about 3 hours by rewriting its guide; wrote or overhauled 8+ team wiki guides and helped shape onboarding for new engineers.

Software Support Specialist *Aug 2021 – Mar 2023*

- Primary support for 3 heavily customized telecom accounts; resolved 283 cases in six months.
- Trained new hires on support processes; selected to move into Software Engineering in 2023.

TEKsystems – IT Technician, Rochester, NY **Apr 2021 – Jun 2021**

TECHNICAL SKILLS

Languages: C#, .NET / .NET Core, SQL (T-SQL), Python

Data: SQL Server, Azure SQL, PostgreSQL, stored procedures, production data fixes

APIs & integration: REST, SOAP, JSON, XML, Postman, binary file parsing, provisioning integrations

Tools & practices: Azure DevOps, code review, Agile/Scrum, change control, IIS, incident response

Testing: Automated, functional and unit testing · **AI:** Claude, Microsoft Copilot, LLM prompt design, AI-assisted tooling

EDUCATION

Houghton College, Houghton, NY **Dec 2020**

B.S. Computer Science · B.A. Data Science · Minor in Communication · President's Scholarship (4 years)
